Other merits of research activity

Regarding research activity and experience, it is necessary to highlight certain points that cannot be measured through scientific publications, dissemination activities or event organisation:

I have developed **fieldwork, interviews and archival analysis** with a wide variety of historical sources –of a religious, noble, public administrative nature, among others– from 16th to 20th century, including oral records. My analytical skills extend to **Portuguese and Spanish archives** at municipal, provincial, Autonomous Community and national level.

I have developed essential activities for the configuration of the **database of the project ReSEED**. This is a historical register of Iberian plants with more than 35,000 entries created for the use of the researcher community. It is a tool that gathers data from multiple sources –e.g. historical documents from public and religious institutions, agricultural and agronomy manuals or travel books. Its development encourages the use of digital tools complementing archival research, thus diversifying history resources. This database was designed to be helpful also for biologists, botanists or agronomists, so it also seeks to promote interdisciplinary knowledge and dialogue. Its configuration required delicate work in conjunction with computer engineers, and provided me with digital skills to operate similar tools. **Database tasks** included designing the information gathering process to facilitate further analyses, data collection, and data input.
